

## Drinking Water Quality Index Summary for Public Water Supplies in Newfoundland and Labrador

| Community Name | Serviced Area   | Source Name   | DWQI      | Rating     |
|----------------|-----------------|---------------|-----------|------------|
| Admirals Beach | Admiral's Beach | 2 Well Fields | Not Given | Not Ranked |

**BOIL WATER ADVISORY:** Drinking water quality was NOT ranked due to the presence of a Boil Water Advisory issued on October 13, 2010 for the following reason: Water entering distribution system or facility, after a minimum 20 minute contact time does not have a free chlorine residual of at least 0.3 mg/l or equivalent CT value. (Please contact your regional Medical Officer of Health for more information).

|          |                      |                           |           |            |
|----------|----------------------|---------------------------|-----------|------------|
| Appleton | Appleton (+Glenwood) | Gander Lake (The Outflow) | Not Given | Not Ranked |
|----------|----------------------|---------------------------|-----------|------------|

**HAA:** Drinking water quality was NOT ranked due to the presence of the following HAA value which exceeds the current guideline. HAA Average = 105.8 ug/l (Please see HAA report for details).

|        |        |                                |    |           |
|--------|--------|--------------------------------|----|-----------|
| Badger | Badger | Well Field, 2 wells on standby | 98 | excellent |
|--------|--------|--------------------------------|----|-----------|

|               |               |     |           |            |
|---------------|---------------|-----|-----------|------------|
| Baine Harbour | Baine Harbour | Dug | Not Given | Not Ranked |
|---------------|---------------|-----|-----------|------------|

**BOIL WATER ADVISORY:** Drinking water quality was NOT ranked due to the presence of a Boil Water Advisory issued on November 14, 2003 for the following reason: Water Supply has no disinfection system. (Please contact your regional Medical Officer of Health for more information).

|                 |                 |         |     |           |
|-----------------|-----------------|---------|-----|-----------|
| Barachois Brook | Barachois Brook | Drilled | 100 | excellent |
|-----------------|-----------------|---------|-----|-----------|

|                   |                   |   |           |            |
|-------------------|-------------------|---|-----------|------------|
| Bartletts Harbour | Bartletts Harbour | Long Pond (same as Castors River North) | Not Given | Not Ranked |
|-------------------|-------------------|---|-----------|------------|

**THM:** Drinking water quality was NOT ranked due to an inadequate number of THM samples to compare to the current THM guideline. (Please see THM report for details).

**HAA:** Drinking water quality was NOT ranked due to an inadequate number of HAA samples to compare to the current HAA guideline. (Please see HAA report for details).

**BOIL WATER ADVISORY:** Drinking water quality was NOT ranked due to the presence of a Boil Water Advisory issued on April 29, 1998 for the following reason: No free chlorine residual detected in the water distribution system. (Please contact your regional Medical Officer of Health for more information).

|         |         |                    |    |           |
|---------|---------|--------------------|----|-----------|
| Bauline | Bauline | #1 Brook Path Well | 92 | very good |
|---------|---------|--------------------|----|-----------|

|             |             |            |    |           |
|-------------|-------------|------------|----|-----------|
| Bay Roberts | Bay Roberts | Rocky Pond | 97 | excellent |
|-------------|-------------|------------|----|-----------|

**AESTHETIC:** The perceived water quality may be lower due to the exceedance of the following aesthetic parameters in your last tap sample: - PH (Please see Tap Water report for details).

|                      |            |                                    |           |            |
|----------------------|------------|------------------------------------|-----------|------------|
| Bay St. George South | Heatherton | #1 Well Heatherton (Home Hardware) | Not Given | Not Ranked |
|----------------------|------------|------------------------------------|-----------|------------|

**CONTAMINANT:** Drinking water quality was NOT ranked due to the presence of the following contaminants in the last tap sample: MANGANESE (Please see Tap Water report for details).

|                      |           |                                  |     |           |
|----------------------|-----------|----------------------------------|-----|-----------|
| Bay St. George South | Highlands | #3 Brian Pumphrey Well Highlands | 100 | excellent |
|----------------------|-----------|----------------------------------|-----|-----------|

A Drinking Water Quality Index (DWQI) is a means to summarize water quality data into simple terms (e.g. good) for reporting to the public in a consistent manner. Similar to the UV index or an air quality index , it tells us, in simple terms, what the quality of drinking water is from your drinking water supply.

Essentially the DWQI is calculated by comparing the water quality data to the Guidelines for Canadian Drinking Water Quality. This calculation produces a score between 0 and 100. A higher score means a better quality of drinking water. The scores are then ranked into one of the six categories described below:

**Excellent:** (DWQI Value 95-100) - Water quality is protected with a virtual absence of impairment; conditions are very close to pristine levels; these index values can only be obtained if all measurements meet recommended guidelines virtually all of the time.

**Very Good:** (DWQI Value 89-94) - Water quality is protected with a slight presence of impairment; conditions are close to pristine levels.

**Good:** (DWQI Value 80-88) - Water quality is protected with only a minor degree of impairment; conditions rarely depart from desirable levels.

**Fair:** (DWQI Value 65-79) - Water quality is usually protected but occasionally impaired; conditions sometimes depart from desirable levels.

**Marginal:** (DWQI Value 45-64) - Water quality is frequently impaired; conditions often depart from desirable levels.

**Poor:** (DWQI Value 0-44) - Water quality is almost always impaired; conditions usually depart from desirable levels
