The Reid Zone is the main area of historical exploration and is classified as an intrusion-hosted style of gold mineralization. The project is reported to contain a 2013 [Inferred Resource](#) of 9,570,000 tonnes grading 0.56 g/t gold for 173,000 ounces of gold.

The last reported drilling on the Reid Zone, in 2011, encountered some of the best grades drilled to date including an intersection of 25.45 metres grading 1.48 g/t gold including 7.80 metres grading 3.62 g/t gold. The zone remains open to depth and along strike with gold mineralization starting near surface.

The project covers approximately 120 kilometres of strike along the Cape Ray Shear Zone. A [scoping study](#) released by the company in 2020, confirmed the viability of a standalone gold mining and processing operation.

In 2023, the company released an updated JORC [Mineral Resource Estimate](#), totaling 9,700,000 tonnes grading 1.96 g/t gold for a total of 610,000 ounces of gold inclusive of Indicated and Inferred Resources. The company is exploring new targets within the resource corridor and greenfield areas.

Multiple gold-bearing quartz veins are reported on the Golden Promise project, owned by Great Atlantic's wholly owned subsidiary, Golden Promise Mines Inc. The Jaclyn Main Zone (JMZ) is the most advanced vein system and has been intersected over a minimum strike length of 800 metres and to a depth of 265 metres. The zone remains open for expansion along strike and depth.

In 2018, Great Atlantic estimated the JMZ to contain an [Inferred Resource](#) of 357,000 tonnes grading 9.3 g/t gold for 106,400 ounces of gold. A drilling and bulk sampling program is planned for 2024-2025.

Project: Great Northern – **Gold**

Status: **Non-Producer**

Stage: Exploration, **Resource Estimate**, Feasibility, Development

Contact: [info@goldhunterresources.com](mailto:info@goldhunterresources.com); [info@magnaterraminerals.com](mailto:info@magnaterraminerals.com)

The project contains multiple gold occurrences, including the Thor and Rattling Brook deposits, the historic Browning Mine, and at least twelve mineralized trends.

In 2019, Magna Terra reported an [Inferred Resource](#) of 5,460,000 tonnes grading 1.45 g/t gold for 255,000 ounces of gold for Rattling Brook. In 2023, Magna Terra reported an [Indicated Resource](#) of 879,000 tonnes grading 1.79 g/t gold for 45,000 ounces of gold and Inferred Resource of 67,000 tonnes grading 1.97 g/t gold for 4,200 ounces of gold for Thor.

The companies are consolidating geological data from various sources to generate a NI 43-101 report for the project and create a comprehensive geological database for the entire district.

Project: Hammerdown – **Gold**

Status: **Non-Producer, Former Producer**

Stage: Exploration, Resource Estimate, **Feasibility**, Development

Contact: [info@maritimegold.com](mailto:info@maritimegold.com)

The Green Bay property hosts four gold deposits with VMS-style base-metal mineralization, two of which – Hammerdown and Rumbullion – have seen historical mine development. The Hammerdown gold mine was last operated by Richmond Mines from 2001 to 2004 producing 143,000 ounces of gold at an average mine grade of 15.7 g/t gold. The property is also host to numerous underexplored gold prospects and showings along with VMS-style base-metal mineralization.

The company released a [feasibility study](#) in 2022 for the restart of the Hammerdown mine as a high-grade open pit project. The study indicated that Hammerdown would produce 1,200 tonnes of ore per day and produce an average of 50,000 ounces of gold per year and a total of 247,000 ounces over the deposit's five-year mine life.

Project: Hope Brook – Gold

Status: Non-Producer, Former Producer

Stage: Exploration, Resource Estimate, Feasibility, Development

Contact: [IR@bigridgegold.com](mailto:IR@bigridgegold.com), [info@firstmininggold.com](mailto:info@firstmininggold.com)

Hope Brook is an advanced stage, high-grade gold project. The former Hope Brook operating gold open-pit mine produced 752,162 ounces of gold plus copper concentrate between 1987 to 1997.

In 2023, Big Ridge Gold released an updated [Mineral Resource Estimate](#) for Hope Brook, containing an Indicated Resource of 16,190,000 tonnes grading 2.32 g/t gold for 1,200,000 ounces of gold, and an Inferred Resource of 2,215,000 tonnes grading 3.24 g/t gold for 231,000 ounces of gold. Recent exploration work has been focused on establishing new drilling targets, completion of environmental baseline work, and additional ore sorting studies of Hope Brook ore.

Project: Point Rousse – **Gold**

Status: **Non-Producer**

Stage: Exploration, **Resource Estimate**, Feasibility, Development

Contact: [info@maritimegold.com](mailto:info@maritimegold.com)

Point Rousse covers three prospective gold trends of approximately 20 kilometres of cumulative strike length. It includes three orogenic gold deposits (Stog'er Tight, Pine Cove and Deer Cove) and numerous prospects and showings all located within 8 kilometres of the Pine Cove Mine and fully permitted Pine Cove Mill.

The Stog'er Tight deposit is reported to contain a 2021 [Indicated Resource](#) of 642,000 tonnes at 3.02 g/t gold for 63,000 ounces of gold and an Inferred Resource of 53,000 tonnes at 5.63 g/t gold for 9,600 ounces of gold. Anticipated exploration work includes a detailed compilation of all existing work on the project and approximately 2,000 metres of diamond drilling at select high priority targets.

Project: Valentine – **Gold**

Status: **Non-Producer**

Stage: Exploration, Resource Estimate, Feasibility, **Development**

Contact: [calibre@calibremining.com](mailto:calibre@calibremining.com)

A 2022 [feasibility study](#) outlined an open-pit mining and conventional milling operation over a 14.3-year mine life and an average gold production profile of 195,000 ounces of gold per year for the first 12 years.

The project has estimated Proven and Probable Mineral Reserves of 51,600,000 tonnes at 1.62 g/t gold for 2.7 million ounces of gold and Measured and Indicated Mineral Resources (inclusive of the Mineral Reserves) of 64,624,000 tonnes at 1.90 g/t gold for 3.96 million ounces of gold. Additional Inferred Resources are 20,752,000 tonnes at 1.65 g/t gold for 1.10 million ounces of gold.

The Valentine Gold Mine construction is underway, with overall progress at 73% as of June 2024, and on track for production in the first half of 2025.
